

Rous Multi Account Manager

Managing multiple accounts from a single MT4 interface for enhanced results

Multi Account Manager (MAM) is designed for brokers to offer their money managers access to an essential integrated software tool to quickly execute block orders with one click under a master account arrangement and conveniently automate trade allocations to customer accounts.

The Rous Multi Account Manager is designed specifically for Money Manager that utilizes the Metatrader 4 platform and it is used in connection with the Rous FX Bridge. It is ideal for traders that manage multiple accounts utilizing Expert Advisors (EAs).

MAM broadens the functionality of the Metatrader by enabling the Money Manager to effectively trade and manage multiple accounts from a single MT4 interface. All managed accounts can be traded from a single MT4 client terminal application.

Benefits of Rous Multi Account Manager

- Trade with Percentage allocations
- Ability to allocate trades to unlimited number of sub accounts
- Money Manager trades only one master account pooled account
- Supports all order types
- Installed on server where MT server is hosted

Features

- Trade block orders from a single master account utilizing the MT4 client terminal
- Unlimited number of customer accounts
- Percentage allocation mode
- Allocations to clients as little as 0.01 lot (1000 currency units)
- Manage multiple master accounts having different strategies
- All normal order types accepted: Market, Stop, Limit
- All unique order types accepted: Trailing Stop, Close by and Close all
- Allows Expert Advisor (EA) trading

- Easily manage Monthly, Quarterly and Annually client reports through MT Manager
- Monitor commissions and performance in realtime

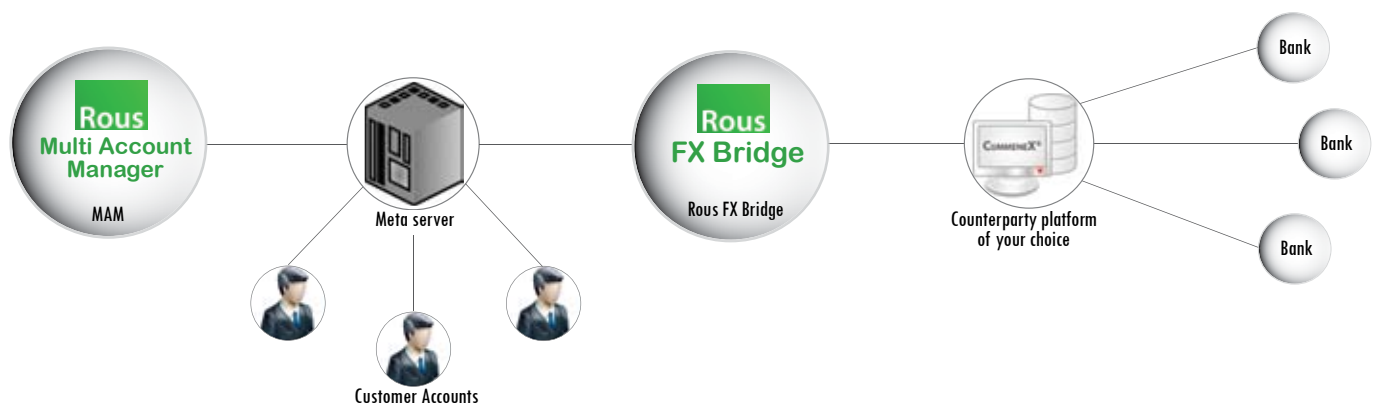

Installation of the Rous Multi Account Manager

- Remote connection to the server where the MT server is installed
- MT Manager account

Installation of the Rous MAM is very simple and takes only a few minutes to install.

MAM has been designed with keeping maximum reliability and speed of execution in mind. In brief, MAM is integrated into MT4 Server. All processing is centralized and server based, which allows the fastest and most reliable integration. Hundreds of accounts can be traded with one click and virtually no delays in allocations. Server based architecture makes it possible to update the software quickly.
